Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles-National Research Council 2010-08-30 Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles evaluates various technologies and methods that could improve the fuel economy of medium- and heavy-duty vehicles, such as tractor-trailers, transit buses, and work trucks. The book also recommends approaches that federal agencies could use to regulate these vehicles' fuel consumption. Currently there are no fuel consumption standards for such vehicles, which account for about 26 percent of the transportation fuel used in the U.S. The miles-per-gallon measure used to regulate the fuel economy of passenger cars. is not appropriate for medium- and heavy-duty vehicles, which are designed above all to carry loads efficiently. Instead, any regulation of medium- and heavy-duty vehicles should use a metric that reflects the efficiency with which a vehicle moves goods or passengers, such as gallons per ton-mile, a unit that reflects the amount of fuel a vehicle would use to carry a ton of goods one mile. This is called load-specific fuel consumption (LSFC). The book estimates the improvements that various technologies could achieve over the next decade in seven vehicle types. For example, using advanced diesel engines in tractor-trailers could lower their fuel consumption by up to 20 percent by 2020, and improved aerodynamics could yield an 11 percent reduction. Hybrid powertrains could lower the fuel consumption of vehicles that stop frequently, such as garbage trucks and transit buses, by as much 35 percent in the same time frame.

The Future of Public Transportation-Paul Comfort 2020-02-15 "Paul Comfort is our industry's leader on what's coming next for mobility. After a thirty year career in public transportation operations and executive leadership, he now travels the globe hearing directly from our top CEOs on what's working, what's not and what's next. If anyone can pull together a compendium on the Future of Public Transportation, it's Paul and he's done so in this book. Congrats!" - Erinn Pinkerton, President and CEO of BC Transit. "With Paul's long and distinguished career in transportation as well as his current involvement in mobility through his podcast Transit Unplugged and other thought leadership, Paul is uniquely positioned to provide a clear eyed and expert view on the future of public transportation and what we as concerned stakeholders should be thinking about."-Blair Schlecter, VP of Economic Development and Govt. Affairs, Beverly Hills Chamber of Commerce "As a 38 year public transportation industry veteran, and former CEO and Chair of APTA, I can say that technology and mobility is adapting faster than ever to societal demands and technological abilities. Paul Comfort has his finger on the pulse of these fast changing developments and has pulled together for this book a top notch roster of executives from the public and private sector to provide their input."-Peter Varga, Former Chair American Public Transportation Association (APTA). This new book "The Future of Public Transportation" is written by transit industry leader Paul Comfort and over forty top public transport leaders, CEOs, futurists and associations. The book examines the transformations

coming this decade for cities and the public transportation systems that serve them allowing readers to become more informed and ready for these changes. In the next few years technology enhancements will produce and expand game changing new mobility options such as autonomous vehicles on regular bus routes and Mobility-as-a-Service (MaaS) smart phone apps allowing passengers to plan, pay for and subscribe to a full menu of traditional public transit and private microtransit options for their travel. Cities will further regulate and optimize the rampant expansion of e-bikes and e-scooters. Mobile public transit fare paying options will expand including allowing the use of not only cell phone and tap and go credit cards but even wearable fare payment jewelry and watches. Traditional transit systems are rebooting their bus networks, adding in high frequency routes & reducing the friction that slows their buses by adding bus only lanes, transit signal priority (TSP) and electronic fare payment systems. TNCs have now entered the public mobility marketplace and are supplementing or replacing public transit services for many. Transit fleets are becoming greener shifting to zero emission fuels like electric or hydrogen, large multinational firms are transforming how we build and operate new rail and other capital projects through Public Private Partnerships (P3). Hyperloop and air taxis are looking more like science than fiction. Cities are becoming "smart" and eliminating traffic in the public square or charging for its usage in peak times. Most transit software is moving to the cloud and privately-owned electric automobiles could be the autonomous taxicabs of tomorrow. All these trends & innovations in technology and business models are explored in depth in this book with the collaboration of thought leaders, industry associations, CEOs and the major companies that are creating and utilizing them. In the end, bold leaders will take us to new horizons as they always have, but they will do so using modern technology to move us in ways we never thought possible, and in the process, eliminate barriers that have too long stood in the way of true mobility for all. And THAT is the Future of Public Transportation.

Chevy Nova 1968-1974-Wayne Scraba 2017-07-17 p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 12.0px Arial} There was a time when the Chevrolet Nova was considered a budget option, a model engineered primarily for the price-conscious customer. Certainly performance models were already in Chevrolet's fold. With the Camaro, the Corvette, and the Chevelle leading the way, why would Chevy need another performance model? Well, savvy Chevy customers knew that you could get a really tricked-out Nova right from the factory with SS packages and big-block 396 engines along with performance transmissions and gearing for a fair amount less than an equally equipped Camaro. As a bonus, Novas were lighter weight too. It was the performance bargain of the Chevy lineup. Fast forward to today. The first-generation Camaros cost a small fortune, and while Novas have held their value quite well, they are still a performance bargain compared to the other Chevy performance models of the era. Not only are they more affordable than Camaros, but you can do a whole lot to make them really fast. In *Chevy Nova 1968-1974: How to Build and Modify*, veteran author and Chevy expert Wayne Scraba shows you all you need to know to build a killer street or strip Nova. Included is detailed information on driveline upgrades, rear-suspension options for the ultimate hook, front-end suspension and chassis components for good handling and weight transfer, excellent brake upgrades, engine swap options, cooling system upgrades, and more. Focusing on quarter-mile performance, Scraba expertly covers all of your options for a strong-running street Nova, a street-strip combo package, or all-out drag racing options. If you want to build your Nova into a quarter-mile warrior, this book is an essential tool for success.

Holley Carburetors-Mike Mavrigian 2016-01-15 During the muscle car wars of the 1960s, Holley carburetors emerged as the carbs to have because of their easy-to-tune design, abundance of parts, and wide range of sizes. The legendary Double Pumper, the universal 600-cfm 1850 models, the Dominator, and now the Avenger have stood the test of time and are the leading carburetors in the high-performance engine market. To many enthusiasts, the operation, components, and rebuilding procedures remain a mystery. Yet, many carburetors need to be rebuilt and properly set up for a particular engine package. Veteran engine building expert and automotive author Mike Mavrigian guides you through each important stage of the rebuilding process, so you have the best operating carburetor for a particular engine and application. In addition, he explains carb identification as well as idle, mid-range and high-speed circuit operation, specialty tools, and available parts. You often need to replace gaskets, worn parts, and jets for the prevailing weather/altitude conditions or a different engine setup. Mavrigian details how to select parts then disassemble, assemble, and calibrate all of the major Holley carburetors. In an easy-to-follow step-by-step format, he shows you each critical stage for cleaning sensitive components and installing parts, including idle screws, idle air jets, primary/secondary main jets, accelerator pumps, emulsion tubes, and float bowls. He also includes the techniques for getting all of the details right so you have a smooth-running engine. Holley carburetor owners need a rebuilding guide for understanding, disassembling, selecting parts, and reassembling their carbs, so the carb then delivers exceptional acceleration, quick response, and superior fuel economy. With *Holley Carburetors: How to Rebuild* you can get the carb set up and performing at its best. And, if desired, you can move to advanced levels of tuning and modifying these carbs. If you're looking for the one complete book that helps you quickly and expertly rebuild your Holley and get back on the road, this book is a vital addition to your performance library.

Made in Korea-Richard M. Steers 2013-08-21 American business folklore is awash with the adventures of successful entrepreneurs. Still, most of these stories are about Americans, neglecting important and courageous entrepreneurs from other countries. Made in Korea recounts the story of how Chung Ju Yung rose from poverty to build one of the world's largest and most successful building empires - Hyundai - through a combination of creative thinking, tenacity, timing, political skills, and a business strategy that few competitors ever understood. Chung entered the shipbuilding business with no experience and went on to create the world's largest shipyard. He began making automobiles when foreign experts unanimously predicted he would fail, and he started a global construction company that has built some of today's greatest architectural wonders. He even convinced the International Olympic Committee to select South Korea over Japan as the site for the highly successful 1988 Olympics. Unlike most CEO's of major firms, Chung has always preferred the company of his workers to that of the global executive elite. Hard work, creativity and a capacity to never give up - this is the essence of Chung's life. In each of his ventures, he exhibited a sheer determination to succeed, regardless of the obstacles, and he worked tirelessly to instill this drive in all of his employees. Even today, in the midst of Korea's worst economic crisis in over four decades, Chung's company is busy implementing plans to emerge as an even stronger contender in the world economy. Illustrated with 32 pages of colour photographs not previously seen in the West, including photos of Chung's recent historic visit to North Korea in 1998, Made in Korea takes stock of Chung's entire life, highlighting both his contributions to society and the lessons his work can teach to aspiring entrepreneurs.

Many of the millions who passionately read the Harry Potter series found they could relate to the details, dreams, and fears of Harry's life. From a phoenix that dies and rises again to Dumbledore, a character who appears in a realm beyond death, there can be little doubt that Rowling's story delves into profound themes and ideas. She tackles issues of grief, responsibility, individual excellence, and heroism in the face of violence and corruption. This philosophical analysis shows that if, in fact, we do find ourselves reflected in Harry's story, then we may also find that our destiny and individual potential resonates with his as well.
